LEADING THROUGH INNOVATION

The Ebac story

Ebac is defined by its continuous Innovation, Quality and Market Leadership. Since inventing the first water cooler with a Watertrail™ in 1995, we've simply never stopped reinventing it.

Ebac has a history of firsts. Many of our brilliantly innovative ideas have now become the standard for every other water cooler manufacturer in the world. Ebac continually sets the bar for what other water coolers should aim to be. First to develop the patented Watertrail™ technology, first to integrate both cup dispensers and wheels into a water cooler, first to create an award winning vacuum insulated hot tank, and the first to develop the unique and patented AquaSafe technology in POU water coolers. Ebac can boast a list of impressive innovations and achievements, but we are continually driven to remain the best and most innovative water cooler manufacturer in the world. Our love of innovation never dies; it is innovation that distinguishes between a leader and a follower.

INNOVATION, QUALITY, LEADERSHIP

Three words that perfectly communicate the very essence of Ebac.

Ebac Water Coolers enables our customers to lead in their market with unique designs and features unrivalled by any other water cooler. These firsts' in innovation offer water coolers that are more efficient and more profitable for all our customers to benefit from.

At Ebac we encourage a culture of quality. Proudly waving the flag for British manufacturing, our customers have peace of mind that our water coolers are both premium and made to ethical and industry standards. We have a team that take all peer ideas on board and produce water coolers that are first in their class and exceed expectations.

Reliability has always been embedded into the Ebac standards. From our climate testing chambers, to our extensive QA procedures and our highly accelerated life testing chamber, the Ebac product reliability lab is second to none. Ebac engineers put as much craft and effort into testing our products as they do designing them. This procedure ensures our products are built to last while offering our customers innovative products which are not only stylish and profit generating, but also of the highest quality.

Innovation, Quality, Leadership isn't a slogan, it's a promise. Don't be left out, read on to find out how you can lead in your market. Ebac don't just create world class water coolers, we also offer the best water drinking experience in the world.

BOTTLED RANGE

Since launching Ebac's first bottled water cooler in 1995, the Easy Cooler, we have achieved 20% of the market share of Europe and at its peak, 1 in 3 water coolers was the EMax bottled water cooler.

OVER 80% OF CONSUMERS PREFER EBAC

THE CONSUMPTION TEST

Ebac wanted to investigate whether the public were particular about which water coolers they consumed from. We believe our water coolers offer a better water drinking experience than our competitor coolers based on advanced functionality and attractive purposeful design. Over the course of a working week, a time-lapse video was taken of the Ebac FMax

Cooler and a main competitor's cooler. The results were remarkable with over 80% of the public choosing the Ebac FMax over the other cooler. Consumers preferred the higher dispense point, they liked the LED lights that lit up when the silver levers were pressed and they preferred the overall modern design of the FMax.

EBAC'S PATENTED AWARD WINNING TECHNOLOGY

Watertrail™ | AquaSafe

100% SANITISATION

is more than just a trend, it is a necessity

THE INSIDE STORY

Watertrail™

In this day and age where hygiene is a high priority on every consumers list, the biggest factor affecting the water cooler market is sanitisation. The industry needs straightforward, effective, simpler sanitisation methods that aren't costly or time consuming.

Ebac believes that the only effective method of 100% sanitisation, is renewal. With Ebac's patented Watertrail™, all parts that come into contact with water, in our bottled water coolers are completely replaced. This is now so simple to change, that it takes less than 30 seconds and can be replaced on customers' premises.

Do more, with less. The Watertrail™ system makes Ebac Coolers the most cost effective coolers in the world to own and maintain and gives companies the option to reduce their overheads with the less manpower required to maintain Ebac Bottled Water Coolers.

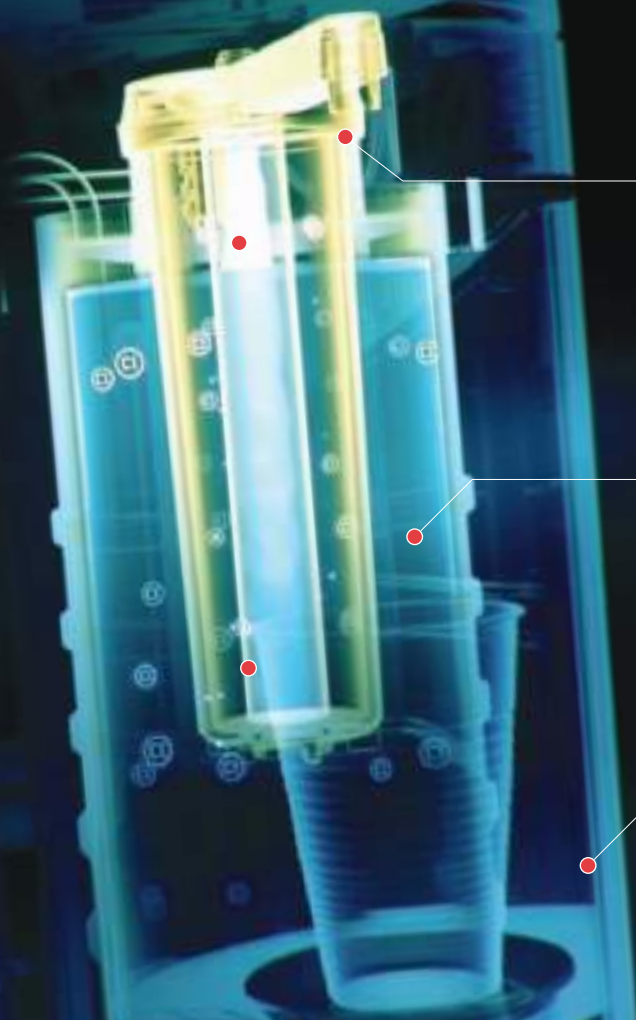

PROTECTION GUARANTEED

AquaSafe

For Ebac POU Coolers, Ebac's patented AquaSafe system is the ultimate method in hygienic filtration systems. The water in the cooler is not filtered until point of dispense, thus preventing any bacterial growth inside the cooler, as the water is still protected by the chlorine present in tap water. This also can be replaced on customers' premises and takes a matter of seconds.

Do more, with less. The AquaSafe system makes Ebac Coolers the most cost effective coolers in the world to own and maintain and gives companies the option to reduce their overheads with the less manpower required to maintain Ebac POU Water Coolers.
